

Ce-MHSL1-5 Compact High Security Sensor

FOR IMMEDIATE RELEASE:

Compact Level 1 High Security Sensor For Door and Window Security

St. Michael, MN, May 30, 2017 – CINCH™ systems, Inc. is pleased to announce another security first—the **Ce-MHSL1-5** AES Encrypted, Level 1, high security door and window sensor with a compact footprint. This new sensor is ideally suited to meet the higher security needs of commercial, government, and military facilities.

"The new Ce-MHSL1-5 sensor is a rugged high security sensor and a small powerhouse. Through our on-going collaboration with MAGANSPIHERE® sensing, we have engineered an encrypted Level 1 sensor with a small footprint that until now, has not been possible. The Ce-MHSL1.5 is fortress of protection – with uncompromising construction, higher sensing performance, and data encryption for securing doors and windows. This new sensor is an important addition to our family of higher level sensors," said Joel Christianson, President and CTO, CINCH systems, Inc.

"We have had one of our high-profile customers asking for smaller sized sensor with higher (Level 1) security features and we are pleased that it is ready. This sensor is built tough with fully-potted components (epoxy encased), a rugged aluminum case, tamper switch, and a fully-shielded cable – all in a compact size. The CE-MHSL1-5 will provide years and years of higher-level intrusion protection," adds Christianson.
